

Daimler-Chrysler office buildings  
Hamburg,

M3 under a hand  
wash basin

S5-U under a  
kitchen sink

DX for the  
shower supply

## Reference:

Daimler-Chrysler office buildings, Hamburg/Germany

Completion: 2001

## Units installed:

- 150 M3 small instantaneous water heaters, undersink.  
The calculation of operating efficiency compared to the use of small storage water heaters clearly proved: With each instant heater, you save more than 100 kW current and 750 l water p.a., thus reducing the running costs by EUR 16 per unit. The operating expenses for 150 units are then cut down by a total of EUR 2,400 p.a.
- 80 S5-U small storage water heaters under the kitchen sinks
- 25 S15 storage water heaters at the drain basins, oversink installation
- 10 DX all-electronically controlled instantaneous water heaters for the shower supply
